Smart Health

IoT has never been more flexible.

- ✓ Cloud provider agnostic
- ✓ Easily configurable dashboard
- ✓ Full scalability
- ✓ Multi-client capability
- ✓ Device provider independent

- Integrated User Management
- Integrated Device Management
- Cloud agnostic application architecture supported by containerized application architecture
- Scalable Microservices architecture
- Short development cycles based on automated CI / CD pipelines
- Secure device communication based on state-of-the-art encryption
- Fieldbus Configurator for Fieldbus Gateway devices
- Over the air (OTA) software updates
- AI on the edge (customer developed)
- Easily customizable dashboard
- Dashboard self-service with easy-to-integrate and highly customizable graphs and tables
- Possibility to deploy custom code to IoT devices

I/O .nite

The IoT Solution that **adjusts to you** and your business needs.

A dashboard designed for you, by you.

Customizing your I/O.nite dashboard to your business needs and wants with **just a few clicks**.

Every organisation and every user is different.
So for us it is important that you, as the user, can easily configure your dashboards according to your needs and wishes.

a product by **CIS Solutions**

Why you choose our solution

Our solution is cloud agnostic.

With I/O.nite you are not bound to one cloud provider.
You get to choose which one you want to go for!

Our Dashboards are easily configurable.

Every organisation is different. So for us it is important that you, as the user, can easily configure your dashboards according to your needs and wishes.

You grow, you scale.

Our solution grows with you and your business. Therefor we build I/O.nite in a way that makes it extremely scalable and keeps you competitive. Always.

We are committed to providing you the **best solution for your business.**
To us this means that we need to adjust to you and your requirements, not you to our solution.

IoT has never been more flexible

- ✓ Cloud provider agnostic
- ✓ Highly configurable dashboard
- ✓ Full scalability
- ✓ Sensor/device provider independent
- ✓ Easy integration
- ✓ A vast variety of supported protocols
- ✓ Highest level of data protection and data security
- ✓ Multi-client capability
- ✓ Managed Service

Where I/O.nite can revolutionise your business

Smart City

Parking garages, public transport, air and water quality, intelligent street lighting, public safety, energy: all subject areas that benefit from the digitalization of cities.

Smart Health

IoT is bringing myriad benefits to the healthcare industry, transforming the way practitioners care for their patients. All areas that help people live a healthy life are being optimized through our solution, such as Fitness tracking, or networking with hospitals and doctors.

Facility Management

New areas of application are emerging, familiar areas are being digitized: Heating and cooling, air quality, water supply, access control and many more are all being monitored centrally, without the need of being on-site.

Smart Factory

By networking the individual machines of a production line, efficiency and throughput can be controlled. Machine utilization increases, downtime is reduced, and the downstream supply chain is optimized.

Smart Mobility

Private mobility and mobile workforce management benefit from networking the individual, mobile person with a central office. E.g. the delivery status of a package can be communicated to the end customer in real time.

Smart Building

Building management in schools, hotels or large offices with hundreds of people places high demands. Those who upgrade to IoT can provide more security, comfort and transparency.

We always find the best solution for you.
