

## Optimise your intermodal services with a TMS and TOS from Yellowstar

Are you looking for a TMS or TOS that will truly set you apart? Your intermodal chains and terminal operations will genuinely improve with Star Flow Intermodal (for your TMS) and Star Flow Terminals (for your TOS). These products give chain cooperation concrete form, both for organising intermodal container transport and for managing one or more container terminals. You always benefit from the latest technology. Our solutions work via the web and with a system link. Hosting takes place in the cloud. Employees, chain partners and customers have access regardless of time and location, enabling them to coordinate with one another to maximum effect at all times. Everyone can proactively play their part in managing the process. This makes both your logistics and terminal operations more transparent, efficient and attractive. Plan yourself a smile!

### Big companies have already taken the step

In 2020, Austria's Rail Cargo Group implemented a new Transport Management System (Star Flow Intermodal) and Terminal Operating System (Star Flow Terminals) with Yellowstar.

neska INTERMODAL organises the logistics process for its six container terminals via Star Flow Terminals. The system was developed together with Yellowstar and offers the logistics provider increased functionality, efficiency and time savings.

### Three benefits that will improve your intermodal services

- Available for your entire supply chain from booking to invoicing
- Access any time, anywhere
- Maximum chain cooperation

Want to know more about how our TMS and TOS solutions can improve your intermodal services? Our logistics IT experts will be pleased to share ideas with you. Call +31 (0)88 - 141 88 00 or e-mail [marketing@yellowstar.com](mailto:marketing@yellowstar.com) to set up an initial meeting!
